

# ACRYLIC

**Our Acrylic digits are 3/8" thick and come in your choice of gloss white or gloss black. We offer our Acrylic line as an economic alternative to black or white address number. Acrylic has UV inhibitors in its composition and will last decades outdoors in all climates. One caution; although very durable, it is a hard plastic and therefor could break if dropped during installation. Once installed they look beautiful with their thicker profile and glossy finish.**

# Mounting Instructions

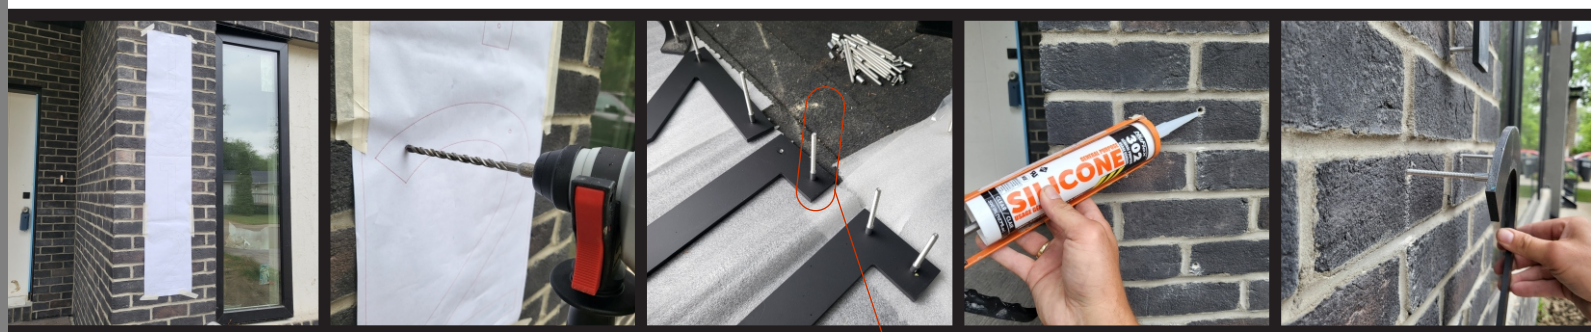

①

②

③

④

⑤

⑥

⑦

- 1) Tape the mounting pattern to the location. Use the box drawn around the numbers as a level marking.
- 2) Drill out the hole locations with the proper 1/4" drilling bit for the surface you are drilling into.
- 3) Screw the mounting pins into the back of the digits. Optional floating effect spacers are shown in the photo.
- 4) Apply silicon or construction adhesive into each hole.
- 6) Push numbers into place. You can mount these numbers flush, or stand them off the wall as far as you desire. The pins are 3" long and allow for a lot of depth. Shown in the image are the optional spacers. These work great on flat surfaces to ensure an even spacing away from the wall. **\*The mounting pins are a 3" long, 10-24 thread and will accept a 10-24 nut.**
- 7) You're all done! Here it is installed.
