

# LED

Warm White 3000K

Cool White 6000K

**Constructed from 3/8" aluminum. CNC milled to house the 12V LED's. And sealed with a 1/4" acrylic back for light dispersion. The backlit LED numbers come in your choice of size, font, finish and LED colour. We carry a 3000K warm white or 6000K cool white. Finish options are brushed aluminum, matte black or semi-gloss white. Additional accessories sold separately. Mounting hardware and mounting template included. These numbers are built to operate in all climate types. -55 C to +55 C.**

# Mounting Instructions

1) Your digit will arrive like this.

2) Taking it apart you will see the acrylic back and the milled aluminum. The LED's are inside and can be removed in the future and replaced if needed.

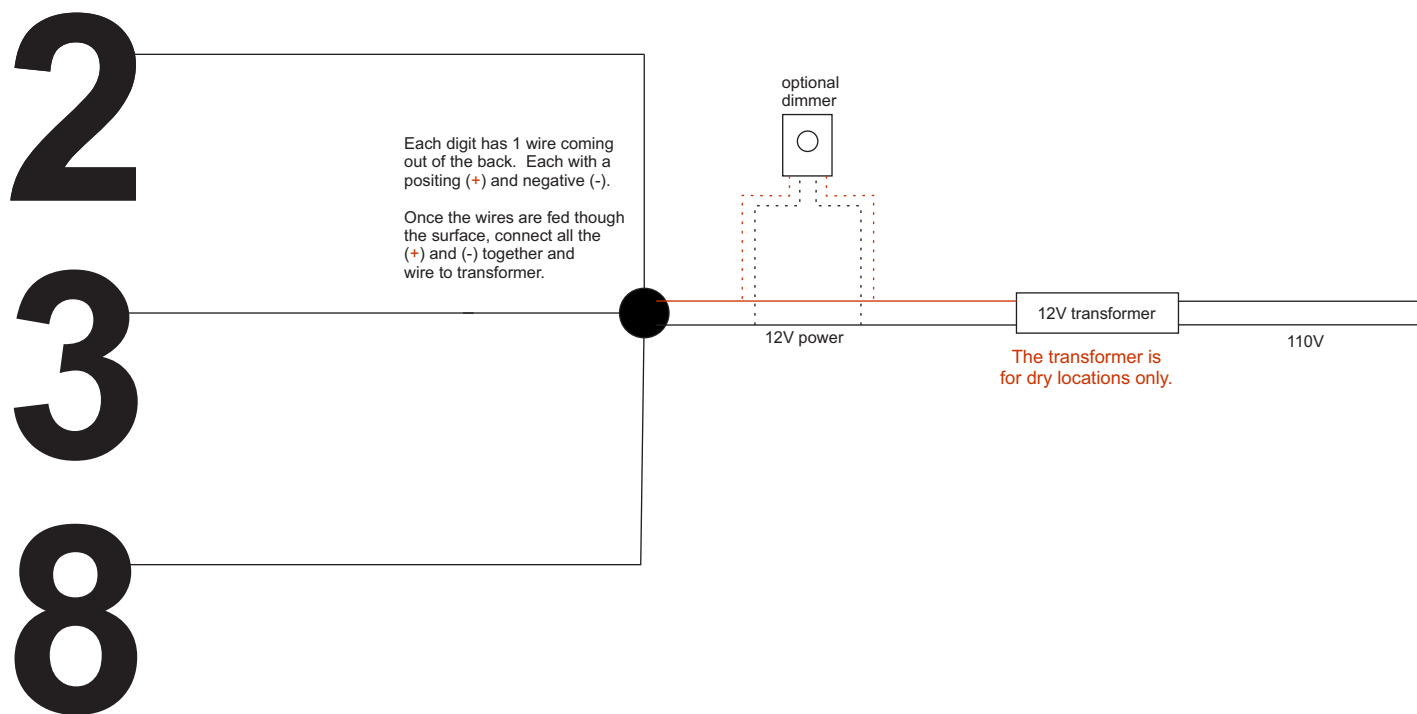

3) There will be temporary shipping screws holding the numebr together. Remove these and replace with the munting hardware.

4) Mount the pattern, level and tape to surface. Drill out holes where shown with the proper drilling bit for the surface you are mounting to.

5 & 6) Put silicon or an adhesive into the mounting holes, feed the wire through first and then push the rest of the digit in. Can be flsh mounted or stood off.

7 & 8) Here it is installed. Once the power has been connected, you are done!

## Timer or Light Sensor

We do not sell these additional items. But if you are looking to include this in your address, a timer or light sensor can be added on the 110V side of power before the 12V transformer.
